### The Caregiver Priorities – Comorbidities & Health Evaluation Checklist (CPCHECKlist©)

#### Description

Comorbidities are common among children with severe cerebral palsy (CP) and have a negative impact on their health-related quality of life. Children with severe CP often require the services of healthcare professionals (HCPs) from multiple disciplines to address these comorbidities.

The Caregiver Priorities – Comorbidities & Health Evaluation Checklist (CPCHECKlist©) is a comprehensive parent/caregiver-reported checklist that captures the presence and severity of different comorbidities, and identifies which of these health issues are of particular concern. The CPCHECKlist© captures the parent/s' perception of their child's status with each health issue, and which of these they wish to have addressed.

The CPCHECKlist© has two parts. The first part captures the presence and severity of 25 different comorbidities; and the second part captures the use of/challenges with 13 different health technologies.

The CPCHECKlist© is to be completed by the patient or their primary caregiver if they are unable to complete it themselves and asks about a broad range of comorbid conditions common in those with cerebral palsy. The purpose of the CPCHECKlist© is to provide patients and their caregivers with an opportunity to identify the areas of care that are most important to them. In turn, this will assist in medical decision-making, help clinicians focus their care, and help them understand a patient's response to medical interventions. The CPCHECKlist© is sensible, reliable (reproducible), valid, and responsive (sensitive to change).

#### Therapeutic Area

- Cerebral palsy (CP)

#### Advantages

- The CPCHECKlist© is intended for parents/caregivers of children or young adults with severe cerebral palsy (CP) and CP-like conditions.
- CPCHECKlist© is completed by the parent or caregiver, typically prior to a clinical encounter Ex. Validated for both youth and adults

#### Additional Information

- Available in various languages
- More details on the uses of CPCHECKlist© can be found [here](#).
